MANUAL TESTING COURSE SYLLABUS

Overview:

Testing is a critical phase of Software Development Life Cycle. Manual testing is the process in which the defects are identified, isolated, subjected for justification and ensure that the product is defect-free, in-order to produce quality product. However, it requires the necessary knowledge such as about different types of manual testing, software development life cycle. In this course you will learn everything that is required from a good manual tester.

Course Objectives

- To understand what is testing?
- To understand Software development model.
- To Understand Architectures of software development.
- To learn the features of Software development models.
- To learn major concepts of the testing methodologies.
- To know different approaches to Testing.
- To understand of the types of testing.
- To plan and create test plan
- To execute the test plan.
- To create and manage test cases and defect profiles.
- To build strategies to track testing processes in the bug tracking systems.
- To do document of the test report in the testing enclosure document.

Pre-requisite / Target Audience:

- Basic Knowledge of Computer.
- Internet Connection.
- Beginners who want to start their career in Software Testing field.
- Already a tester: You can refresh all your testing basics and techniques and gear up for Certifications in Software Testing
- Fresh Graduates: If you have passed out of college recently, and looking for a job in QA/Testing Industry, then this course will definitely help you build skills required for your first job
- Non-Programmers: If you are interested in IT, but hate programming or find it difficult, then Testing allows you focus less on programming and more on analysis skills.
- Non IT Professionals: If you are currently working in some other field, but interested in building a career in IT, then this course will help you step into the IT field

Module 1: Software Testing Introduction

In this module you learn about Importance of testing. Why Testers need industry, software program/application/product: meets the business and technical requirements that guided its design and development works as expected.

- What is testing?
- Importance of testing
- Roles and Responsibilities
- Principles of software testing
- What is Quality?
- How much testing is enough?
- Differences between Manual and Automation Testing.

Module 2: Software Development Life Cycle

In this module you learn about development procedure. SDLC stands for Software development life cycle. It is a process that describes how to develop, design and maintain the software project ensuring that all the functional & user requirement, goals and objective are met.

1. SDLC Phases

- Requirements Phase.
- Analysis Phase.
- Design phase.
- Coding Phase.
- Testing phase.
- Delivery and Maintenance Phase.

2. SDLC Models

- Waterfall Model.
- V Model
- Agile Model.
- Prototype Model.
- Spiral Model.

Module 3: Software Testing Methodologies

In this module you learn about different types of software testing. Software Testing Methodology is defined as strategies and testing types used to certify that the application under test meets client expectations.

- White Box Testing.
- Black Box Testing.
- Grey Box Testing.

Module 4: Test Case Design Techniques

In this module you learn design test cases in such a way that we get the maximum coverage using an optimal set of Test cases. Focus on highlighting the various Methods and Techniques in designing test cases for both Black Box Testing and White Box testing.

Static Techniques:

- Informal Reviews
- Walkthroughs
- Technical Reviews
- Inspection

Dynamic Techniques:

Structural Techniques

- Statement Coverage Testing
- Branch Coverage Testing
- Path Coverage Testing
- Conditional Coverage Testing
- Loop Coverage Testing

Black Box Techniques

- Boundary Value Analysis
- Equivalence Class Partition
- State Transition Technique
- Cause Effective Graph
- Decision Table
- Use Case Testing

Experienced Based Techniques:

- Error guessing
- Exploratory testing

Module 5: Levels of Testing

In this module you learn about levels of testing are frequently grouped by where they are added in the software development process, or by the level of specificity of the test.

1. Functional Testing

- Unit Testing
- Integration Testing
- System Testing
- User Acceptance Testing.
- Sanity/Smoke Testing.
- Regression Test.
- Retest.

2. Non Functional Testing

- Performance Testing.
- Memory Test
- Scalability Testing.
- Compatibility Testing.
- Security Testing.
- Cookies Testing.
- Session Testing.
- Recovery Testing.
- Installation Testing.
- Adhoc Testing.
- Risk Based Testing.
- I18N Testing.
- L10N Testing.
- Compliance Testing.

Module 6: Software Testing Life Cycle

In this module learn about in detail description of Test Life Cycle, importance of Test Plan roles and responsibilities of Test Manager, Test Lead, Test Engineer,

1. Requirements Analysis/Design

- Understand the requirements
- Prepare Traceability Matrix

Planning

- Object.
- Scope of Testing.
- Schedule.
- Approach.
- Roles & Responsibilities.
- Assumptions.
- Risks & Mitigations.
- Entry & Exit Criteria.
- Test Automation.
- Deliverables.

3. Test Cases Design

- Write Test cases
- Review Test cases
- Test Cases Template
- Types of Test Cases
- Difference between Test Scenarios and Test Cases.

4. Test Environment setup

- Understand the SRS
- Hardware and software requirements
- Test Data

5. Test Execution

- Execute test cases
- Defect Tracking and Reporting
- Types of Bugs.
- Identifying the Bugs.
- Bug/Defect Life Cycle.
- Reporting the Bugs.
- Severity and priority

6. Test Closure

- Criteria for test closure
- Test summary report

7. Test Metrics

- What is Test Measurements?
- Why Test Metrics?
- Metric Life Cycle.
- Types of Manual Test Metrics.

Module 7: QA & QC & Testing

In this module you learn about QA & QC and How to log bugs in Project management tool, how to give severity, priority to bugs.

- What is Quality Assurance?
- What is Quality Control?
- Differences of QA & QC & Testing

Test Management with JIRA Tool (Learn & Implement) Defect Tracking Tools (Learn & Implement)

- JIRA

Real-time Project involving most of the above concepts with following will be provided

- Product Abstract Document
- Requirement Specification Document
- Step-by-Step procedure for Testing the project from ground up**
- Complete Test plan, Test Cases, Traceability, Defect tracking report documents

At the end of the course participants will be able to

1. At the end of this course, students will be able to understand the complete cycle of Manual Testing.
2. Students will be seeing the live project and will be able to start the career in the Software Quality Assurance filed.

(Automation) Selenium with Java Syllabus

Overview:

Selenium with Java is a free automation testing tool for web applications. It is able to work with different browsers like Chrome, Firefox, IE, Opera and simulate human like behavior.

Selenium is able to interact with all the different elements in a webpage. It can click on them, input text, extract text and much more. By covering all the different functionalities on your website with Selenium tests, you will be able to quickly catch new and reappearing old bugs. This will save your time and money, we can run our test cases on various environments using selenium grid and we can integrate with project management tools for managing the projects.

Course Objectives:

- Understand Selenium IDE
- Understand web elements
- Understand JUnit/TestNG framework
- Taking screen shots using selenium
- Understand Extent Reports
- Handling multiple windows, pop-ups, alerts
- Develop Various frameworks
- Freelancers that want to make bug free websites.

Pre-requisite / Target Audience:

Basic knowledge on programming language Java

Module 1: Introduction to Automation Testing

In this module, we can learn about automation testing and when to automate the application. We can also look into different automation tools in the market, and we will discuss about advantages and disadvantages of automation tool.

- What is Automation testing
- Advantages of Automation testing
- Disadvantages of Automation testing

Module 2: Introduction to Selenium

In this module, we will discuss briefly about selenium tool and history of it. We will compare selenium with other tool like QTP and we can look into major components in selenium like Selenium IDE, Selenium RC, Selenium Webdriver and Selenium Grid.

- History of Selenium
- Why Selenium tool
- Differences between Selenium and other Tools
- Different components in Selenium

Module 3: Introduction to JAVA

In this module, we will talk about java and features of java, and what is JVM and JRM. We will discuss about different types of data types and conversion of data types, and control statements (loops like for, while, do while, if) with examples. What is string and different methods in strings. We will discuss about one dimensional array and two dimensional array along with real time examples and more details about functions and parameterization and how to return the functions and use it with on other functions.

- Introduction to java
- Installation of Eclipse IDE
- Data types
- Control Statements
- Strings
- Arrays
- What are Functions?
- Function Input Parameters
- Function Return Types

Module 4: Object Oriented Programming -1

In this module, we discuss about class and local variables, global variables. how to create static and non-static methods and how to access them. How to create Object and call the functions? What is constructor and when to use constructor, what is parameterized constructor and how to pass parameters in constructor.

- Class
- Variables
- Static and non-static variables
- Static and non-static functions
- Object
- Constructor

Module 5: Object Oriented Programming -2

In this module, we will discuss about concept of Inheritance and how we can overload and override functions. What is package and how to access classes across packages. What are the different access modifiers available in java (Public, Private, Protected) and how to use them. How to handle exception and what is try and catch block, differences between throw and throws, final and finally, and different kinds of exceptions.

- Inheritance
- Overloading's and Overriding Functions
- Packages
- Access Modifiers
- Exception Handling

Module 6: Object Oriented Programming – 3

In this module, we will discuss about different types of collections like Arraylist, set, hashtable and how to use them. How to read and write text file and how to read properties files, and how to read and write excel sheet using apache poi

- Collections
- File Handling

Module 7: Introduction to Selenium IDE

In this module, we will discuss about features of Ide and limitations of IDE.

- Installation and Introduction to IDE
- Creating first script using record and playback
- Installation of Inspector Tools and its Uses.
- Generating Scripts using different Web Elements
- Handling Wait Commands
- Handling Validations Commands
- Handling Store Commands
- Limitations of IDE

Module 8: Introduction to Selenium WebDriver 3

In this module, we will talk about webdriver and its features, and we will write a sample program for better understanding. In this module, we talk about basic features of webdriver like get and navigation functions, different types of Waits, taking screenshot and etc.

- First Program on selenium
- Verify Page title in Selenium Webdriver
- Navigation in selenium
- Radio button and Checkbox in Selenium Webdriver
- Handling AutoSuggestion
- Handling DropDownList
- Handling File upload using Sikuli/Auto IT
- Handling Drag and Drop in Selenium
- Handling Mouse Hover,Keyword Events using Action class
- Synchronization using webdriver(Waits)
- How to take screenshot using selenium
- How to Take Multiple Screenshots
- How to capture Error message using webdriver
- Handling Multiple windows
- Handling Alert Messages.
- Handling IFrames.
- Cross Browsing using selenium
- Complete details of Dynamic XPath in Selenium
- Complete details on CSS in selenium
- How to download files in Selenium Webdriver.
- Handling WebTable
- Handling WebCalendar
- How to use Logs File in selenium
- How to use Properties File in selenium

Module 9: What is Framework

In this module, we will discuss about very important topic i.e., frameworks.

- What is Framework
- Types of Framework
- Use of Framework

Module 10: TestNG Framework

In this module, we will discuss about TestNG, what is the advantages of testng over Junit. We will look at different annotations and how to use them in selenium, and integrating different types of reports(XSLT, Extent Reports) to testng and parallel execution of test cases and creating maven project and adding dependencies to pom.xml file and how to run maven project.

- Configure Eclipse with Selenium and TestNG
- New- Installation of TestNG
- Create First TestNG Program and Execute.
- Check reports generated by TestNG
- How to execute only failed test cases in Selenium Webdriver
- What is TestNG Listeners and How to implement TestNG Listener in Selenium Webdriver
- How to run group Test cases in Selenium using TestNG
- How to run Multiple Programs using TestNG.
- Execute Selenium Webdriver Test cases parallel using TestNG
- XSLT report generation generation using TestNg and Ant
- Building a BAT file to run tests using ANT
- Putting Dataproviders for multiple tests in a single file
- Parameterizing/Sharing single dataprovider for multiple test cases
- TestNg Maven Configuration
- Maven-surefire-report-plugin with testng
- Executing testng from maven on Command Prompt
- Generating Maven Surefire Reports
- Generating XSLT Reports with Maven
- Managing Multiple test Suites

Module 10: DataDriven Framework

In this module, we will discuss about datadriven framework with sample project and how to run deploy src to github and how to run project through Jenkins and sending reports via emails, and how to run parallel using grid.

- What is data driven Framework
- Write Excel using Apache poi/JXL
- Read Excel using Apache poi/JXL
- Goals to be achieve in data driven framework
- Creating a Core Framework
- Create Maven Project and Packages
- Creating test Cases
- Build base test
- Build Validations Functions
- Build generic Functions.
- Softassertions and extent reports
- Logging into reports
- Put Screenshots to reports
- Initiate properties files
- Build a centralized/reusable function to extract objects
- Reading Data from XLS-Parameterizing tests
- Build the utility function for reading data
- Selectively/Optionally Run tests
- Reports - XSLT, Extent Reports
- Run project with ANT/Maven/Eclipse

Module 11: Hybrid Framework

In this module, we will discuss about Hybrid framework with sample project and deciding keywords and call them from excel sheet based on the run modes and how to run deploy src to github and how to run project through Jenkins and sending reports via emails, and how to run parallel using grid.

- What is data driven Framework
- Write Excel using Apache poi/JXL
- Read Excel using Apache poi/JXL
- Goals to be achieve in data driven framework

- Creating a Core Framework
- Deciding keywords
- Generic and application dependent Keywords
- Using reflection API to call keyword functions
- Create Maven Project and Packages
- Creating test Cases
- Build base test
- Build Validations Functions
- Build generic Functions.
- Soft assertions and extent reports
- Logging into reports
- Put Screenshots to reports
- Initiate properties files
- Build a centralized/reusable function to extract objects
- Reading Data from XLS-Parameterizing tests
- Build the utility function for reading data
- Selectively/Optionally Run tests
- Reports - XSLT, Extent Reports
- Run project with ANT/Maven/Eclipse

Model 12: Database Testing

In this module, we will discuss about mysql or sql sever and necessary commands. We will also see that how to integrate it to selenium project using server jar files

- Install MySQL Server
- Discussion on JDBC Drivers and Other drivers
- Connection interface
- Statement and prepared statement interface
- Resultset interface
- Discussion on various commands like select, delete, update, insert queries
- Using TestNG annotations to establish database connection
- Sample Connection on application and Validations on it.

Module 13: Jenkins + Git + GitHub

In this module, we will briefly talk about git, github and how to push code to github and installation of Jenkins and how to execute test scripts through Jenkins, builds fails send email to respective user

- What is Continuous Integration
- What is Jenkins and how it helps in CI
- Downloading and installing Jenkins
- Executing simple batch commands
- Scheduling time for test execution.
- Executing Selenium Project builds with ANT
- Build Triggers
- Mailing if build fails
- Configuring/Scheduling Maven Project in Jenkins
- Downloading and installing GIT
- Installing GIT and GITHUB plugins for jenkins
- Configuring ssh host keys for GIT and Jenkins
- Git Bash commands and operations
- Uploading project to GIT using GIT Bash
- Cloning projects
- Creating branch/forks
- Configuring/Scheduling remote Git maven project in Jenkins

Module 14: Selenium Grid

In this module, we will discuss about hub and node concept, how to run parallel execution on different nodes. How to create json file for parallel execution.

- Introduction to Grid
- reading Nodes and Hubs
- Deciding number of browsers on a Node
- Deciding type of browsers on Node
- Limiting number of concurrent browsers on node
- Difference between maxSession and maxInstance
- Configuring chromedriver and IEdriver exe files on grid
- Testng configurations
- RemoteWebDriver and DesiredCapabilities

- Configuring JSON file format to initialize/configure hub and nodes
- Running single test on single node - serially in multiple browsers
- Running single test on single node – parallely on multiple browsers
- Running single test on multiple nodes – each node having different browser
- Can we decide node to run test?
- Running multiple tests spread across 3 nodes – one for ie, one for firefox and one for chrome
- Node Timeout
- Prioritizing the test cases
- Prioritizer Interface and CustomPrioritizer
- Sharing same webdriver instance among multiple tests after prioritizing them
- Grid Coding in eclipse
- Creating a Grid sample test case
- End to end scenario building and execution on Grid -demonstration on one node
- End to end scenario building and execution on Grid -demonstration on multiple nodes on virtual machine
- End to end scenario building and execution on Grid -demonstration on multiple nodes on virtual machine and on multiple browsers.
- Resume Preparation.**
- Mock interviews and assignments.**
- Daily tasks will be assigned to students**

Module 15: Page Object Model

In this model, we will see how to create page object framework and page factory with sample examples.

- What is Page Object Model
- When to use POM
- Examples to POM
- POM using Page Factory
- Sample Examples for POM.

Real-time Project involving most of the above concepts with following will be provided

- Product Abstract Document
- Requirement Specification Document

- Step-by-Step procedure for building the project from ground up**
- Complete Source Code
- Database Connections and comparing data in Database.
- Instructions to Setup the Project on a Testing box
- Instruction to Deploy using project management tools

At the end of the course participants will be able to

1. Understand about automation testing
2. When and why to use automation testing
3. Understand about java programming language
4. About selenium components and how to use them on web applications
5. Understand about Project management tools.
